

Multi-SIM trust scoring

■ User / output ■ Platform / AI ■ Network APIs ■ Third parties

VID — prototype architecture

Layer 1 — frontend (React / mobile web)

Enrollment form

Phone + consent capture

Trust score UI

Live signal breakdown

VID certificate view

QR + score + signals

HTTPS POST

Layer 2 — backend API (Node.js / Python)

Consent manager

Validates user opt-in

API orchestrator

Calls all CAMARA APIs

AI trust engine

Scores 0–100

VID generator

Issues QR cert

CAMARA calls

Layer 3 — Nokia Network-as-Code / CAMARA APIs

SIM Swap

Stability check

Number verify

Active real number

KYC Match

Profile match

Location verify

Region consistency

Device status

Active device

Each API returns yes / no — no raw data ever leaves the network

scored signals

Layer 4 — output + storage

VID certificate

QR · score · signals

Verification API

Third parties scan QR

Minimal store

Hash · score · date

Audit log

Consent trail

Frontend

Backend

Network APIs
